Technologies, Workflow Automation

SCOPE

Digital Public Services / Citizen Experience / Accessibility / Inclusive Service Delivery

DESCRIPTION

Develop an accessible digital public-service platform that makes government services easier to discover, understand, apply for, and track. The platform should reduce complexity in navigating government services and support citizens with different digital skills, languages, accessibility needs, and connectivity conditions. A unified, citizen-centred experience can help reduce fragmented service journeys, while accessible design and assisted guidance can address barriers faced by users with disabilities or limited digital literacy.

KEY DELIVERABLES

- ✓ Centralized public-service discovery
- ✓ Citizen registration and secure authentication
- ✓ Search and categorization of government services
- ✓ Simple step-by-step service guidance
- ✓ Eligibility and required-document guidance
- ✓ Online application/request submission
- ✓ Document upload and management
- ✓ Application status tracking

Overview

My Team

- ✓ AI-powered citizen assistance
- ✓ Natural-language service search and guidance
- ✓ Multilingual support, including Indian languages
- ✓ Voice-based assistance where applicable
- ✓ Accessibility support for users with disabilities
- ✓ Screen-reader-friendly interfaces
- ✓ Adjustable text/display and accessible navigation
- ✓ Low-bandwidth-friendly experience
- ✓ Assisted digital workflows for users with limited digital literacy
- ✓ Service-specific FAQs and knowledge base
- ✓ Appointment/office information where applicable
- ✓ Admin dashboard for service and content management
- ✓ Application/request management
- ✓ Citizen feedback mechanism
- ✓ Service usage and accessibility analytics
- ✓ Secure handling of citizen information
- ✓ Audit trail and activity history
