AI-ASSISTANT-FOR-WORKERS

Advanced

 General

AI Assistant for Workers

Web Development

Agentic AI

INDUSTRY

Workforce / Gig Economy / Labour Services / Enterprise

PLATFORM / TECH

Agentic AI, Generative AI, LLMs, NLP, Web Application, Mobile Application, Workflow Automation, Notifications, Data Analytics

SCOPE

Worker Assistance / Task Management / Workplace Support / Productivity / Communication

DESCRIPTION

Develop an AI-powered assistant that helps workers manage their day-to-day work activities, understand assigned tasks, access relevant information, and receive timely assistance. The assistant should adapt to the worker's role, responsibilities, working context, and current tasks.

It should help workers understand instructions, prioritize tasks, track progress, receive reminders, resolve routine queries, and access relevant workplace information through natural-language interaction. The system should support different categories of workers and remain usable for workers with varying levels of digital literacy.

KEY DELIVERABLES

- ✓ Worker registration and profile management
- ✓ Role and job-type configuration
- ✓ Work responsibilities and task management
- ✓ Daily task and work-plan management
- ✓ Task assignment and status tracking
- ✓ AI-powered task prioritization
- ✓ Deadline and priority management

Overview

My Team

- ✓ Workplace information and knowledge access
- ✓ Context-aware answers and suggestions
- ✓ Task-related Q&A
- ✓ Step-by-step guidance for routine work
- ✓ Follow-up and action-item identification
- ✓ Work reminders and notifications
- ✓ Shift and schedule information
- ✓ Attendance/work-status integration where applicable
- ✓ Progress tracking
- ✓ Completed and pending task views
- ✓ Daily/weekly work summaries
- ✓ AI-generated task summaries
- ✓ Role-specific recommendations
- ✓ Multilingual support
- ✓ Voice-based interaction where applicable
- ✓ Low-literacy-friendly interaction
- ✓ Low-bandwidth support
- ✓ Worker feedback mechanism
- ✓ Supervisor/manager dashboard where permitted
- ✓ Task and workforce analytics
- ✓ Performance and workload insights
- ✓ Escalation of issues to supervisors
- ✓ Role-based access control
- ✓ Secure worker and workplace data
- ✓ Audit trail for important actions
- ✓ Human control over consequential workplace decisions
