Problem statement

AI-BUSINESS-ASSISTANT-FOR-LOCAL-RETAIL-STORES

Advanced

General

AI Business Assistant for Local Retail Stores

Web Development

Agentic AI

INDUSTRY

Retail / Local Commerce / Small Business

PLATFORM / TECH

Agentic AI, AI/ML, Generative AI, NLP, Web Application, Inventory Management, Sales Analytics, Data Analytics, Workflow Automation

SCOPE

Retail Business Management / Store Operations / Inventory / Sales / Customer Management

DESCRIPTION

Develop an AI-powered business assistant for local retail stores that helps shop owners manage and understand their day-to-day business operations. The assistant should use store data such as sales, inventory, products, customers, and business activity to provide useful insights, answer business-related questions, identify operational issues, and recommend actions. The system should reduce manual effort and help local store owners make informed operational decisions.

KEY DELIVERABLES

- ✓ Store/business profile management
- ✓ Product catalogue management
- ✓ Inventory and stock tracking
- ✓ Sales and transaction management
- ✓ Customer information management
- ✓ AI-powered business assistant
- ✓ Natural-language business queries
- ✓ Sales and revenue analysis

Overview

My Team
