INDUSTRY

Travel & Tourism / Hospitality / Transportation

PLATFORM / TECH

Agentic AI, Generative AI, LLMs, Recommendation Systems, Maps APIs, Web Application, Real-Time Data, NLP

SCOPE

Travel Planning / Personalized Itinerary Generation / Trip Optimization / Travel Assistance

DESCRIPTION

Develop an AI-powered dynamic travel planning agent that creates personalized travel itineraries based on user preferences, destination, budget, duration, interests, transportation, accommodation, and available activities. The agent should be able to adapt the itinerary when travel conditions or user preferences change, while helping users discover places, organize activities, estimate travel time, and manage the overall trip plan. The system should provide conversational assistance and explain the reasoning behind itinerary recommendations.

KEY DELIVERABLES

- ✔ User profile and travel-preference management
- ✔ Destination selection
- ✔ Trip duration and budget configuration
- ✔ Interest and activity preference selection
- ✔ AI-generated personalized itinerary
- ✔ Day-wise trip planning
- ✔ Attraction and activity recommendations
- ✔ Restaurant and accommodation recommendations

- ✓ Route and distance calculation
- ✓ Travel-time estimation
- ✓ Budget estimation and expense breakdown
- ✓ Schedule and activity optimization
- ✓ Alternative itinerary suggestions
- ✓ Conversational travel assistant
- ✓ Natural-language itinerary modification
- ✓ Dynamic itinerary updates
- ✓ Weather/event/availability-aware recommendations where data is available
- ✓ Map-based itinerary visualization
- ✓ Booking/reference information integration where applicable
- ✓ Saved trips and itinerary history
- ✓ Notifications and travel reminders
- ✓ Shareable itinerary
- ✓ Trip dashboard
- ✓ Travel analytics and expense tracking
