

REVIEW CHALLENGE

Problem statement

AI-EV-CHARGING-ROUTE-PLANNING-PLATFORM

Advanced

General

AI EV Charging & Route Planning Platform

Web Development

Agentic AI

INDUSTRY

Electric Mobility / Transportation / CleanTech / Smart Cities

PLATFORM / TECH

AI/ML, Agentic AI, Web Application, Maps API, Route Optimization, Geolocation, EV Charging Data, Real-Time Data, Data Analytics

SCOPE

EV Route Planning / Charging Station Discovery / Charging Optimization / Electric Mobility

DESCRIPTION

Develop an AI-powered platform that helps electric vehicle users plan journeys while considering charging requirements. The system should identify suitable charging stations along a route, estimate charging needs, and recommend routes based on factors such as distance, vehicle range, charging availability, travel time, and user preferences. The platform should help users avoid range-related issues and make informed charging and route decisions.

KEY DELIVERABLES

- EV and vehicle profile management
- Battery capacity and current charge input
- Driving-range estimation
- Source and destination selection
- Route planning
- EV-compatible charging station discovery
- Charging station location mapping
- Charging availability information
- Charging stop recommendations

- ✓ Battery consumption estimation
- ✓ Charging-time estimation
- ✓ Travel-time and distance calculation
- ✓ Multiple route alternatives
- ✓ Route comparison based on charging and travel requirements
- ✓ Real-time or simulated charging-status updates
- ✓ Low-battery and range-risk alerts
- ✓ Charging-stop notifications
- ✓ Map-based route visualization
- ✓ User preference configuration
- ✓ Saved routes and trip history
- ✓ Charging and travel analytics
- ✓ Admin management of charging-station data
- ✓ Dashboard and reporting
- ✓ Support for future real-time EV ecosystem integrations
