INDUSTRY

Gig Economy / Logistics / Delivery / Mobility /
Workforce Platforms

PLATFORM / TECH

Agentic AI, AI/ML, Predictive Analytics,
Recommendation Systems, Web Application,
Data Analytics, Geolocation, Real-Time Data,
Notifications

SCOPE

Gig Worker Earnings / Work Optimization / Task Selection / Income Analytics

DESCRIPTION

Develop an AI-powered assistant that helps gig workers understand and optimize their earnings based on available work opportunities, working hours, location, demand patterns, incentives, and historical performance. The assistant should provide personalized insights and recommendations on when and where to work, which available tasks to consider, and how different work patterns may affect earnings. The system should present these recommendations transparently so workers can make their own decisions.

KEY DELIVERABLES

- ✓ Gig-worker profile and preferences
- ✓ Earnings and work-history tracking
- ✓ Task/order opportunity data
- ✓ Location and working-area management
- ✓ Working-hour and availability configuration
- ✓ Earnings analysis
- ✓ Historical income analysis

Overview

My Team

- ✓ High-demand area identification
- ✓ Incentive and bonus tracking
- ✓ Estimated earning analysis for available opportunities
- ✓ AI-powered work recommendations
- ✓ Personalized earning insights
- ✓ Recommended working schedules
- ✓ Location-based opportunity insights
- ✓ Task/ride/order selection assistance
- ✓ Earnings forecasting
- ✓ Daily/weekly/monthly earning summaries
- ✓ Goal and target management
- ✓ Notifications and opportunity alerts
- ✓ Interactive earnings dashboard
- ✓ Maps and location visualization
- ✓ Performance and productivity analytics
- ✓ Recommendation explanations
- ✓ User-controlled preferences and decisions
- ✓ Historical recommendation tracking
- ✓ Reports and data export
