SCOPE

AI Mock Interviews / Interview Preparation / Candidate Assessment / Skill Evaluation

DESCRIPTION

Develop an AI-powered mock interview panel that simulates realistic technical, behavioral, and role-specific interviews. The system should generate questions based on the candidate's target role, experience level, skills, and selected interview type, conduct an interactive interview, ask relevant follow-up questions based on previous responses, and evaluate the candidate's performance. It should provide a detailed feedback report highlighting strengths, weaknesses, skill gaps, communication quality, technical accuracy, and areas for improvement. Existing AI mock-interview implementations demonstrate role-aware question generation, adaptive follow-ups, voice interaction, transcripts, scoring, and progress analytics as practical components of such a system.

- KEY DELIVERABLES
- PS-60 — AI Mock Interview Panel Agent
  - Problem Statement ID: Not specified
  - Organization: Not specified
  - Department: Not specified
  - Target Domain: Agentic AI, Web Development, Vibe Coding
  - Difficulty: Advanced

- ✓ Platform/Tech: Agentic AI, Generative AI, NLP, Speech-to-Text, Text-to-Speech, LLMs, Web Application, Voice AI, Data Analytics
- ✓ Description:
  - ✓ Develop an AI-powered mock interview panel that simulates realistic technical, behavioral, and role-specific interviews. The system should generate questions based on the candidate's target role, experience level, skills, and selected interview type, conduct an interactive interview, ask relevant follow-up questions based on previous responses, and evaluate the candidate's performance. It should provide a detailed feedback report highlighting strengths, weaknesses, skill gaps, communication quality, technical accuracy, and areas for improvement. Existing AI mock-interview implementations demonstrate role-aware question generation, adaptive follow-ups, voice interaction, transcripts, scoring, and progress analytics as practical components of such a system.
- ✓ Key Deliverables:
  - ✓ Candidate profile and target-role configuration
  - ✓ Role and skill-based interview generation
  - ✓ Technical interview mode
  - ✓ Behavioral interview mode
  - ✓ HR interview mode
  - ✓ System-design or domain-specific interview mode
  - ✓ AI-generated interview questions
  - ✓ Adaptive follow-up questions
  - ✓ Multi-round interview simulation
  - ✓ Voice-based interview interaction
  - ✓ Speech-to-text transcription
  - ✓ Text-to-speech interviewer
  - ✓ Real-time interview session interface
  - ✓ Evaluation of technical accuracy
  - ✓ Problem-solving assessment
  - ✓ Communication assessment
  - ✓ Behavioral-response assessment
  - ✓ Interview confidence and response-quality analysis
  - ✓ Skill-gap identification
  - ✓ AI-generated interview feedback

Overview

My Team

- ✓ Interview transcript and session history
- ✓ Progress tracking across multiple interviews
- ✓ Candidate performance analytics dashboard
- ✓ Downloadable interview reports
- ✓ Configurable interview duration and difficulty
- ✓ Human-review or configurable evaluation criteria where required
