Agentic AI, Generative AI, LLMs, NLP, Web Application, Mobile Application, Order Management, Maps API, Geolocation, Real-Time Data, Notifications

SCOPE

Order Tracking / Customer Support / Delivery Management / Conversational Commerce / Logistics Visibility

DESCRIPTION

Develop an AI-powered order tracking assistant that helps customers easily understand and track their orders throughout the delivery lifecycle. The assistant should retrieve order information, provide real-time or simulated status updates, explain delivery stages, and answer customer questions using natural language.

The system should provide information such as order confirmation, preparation, dispatch, pickup, estimated delivery time, delivery location, and completion status. It should proactively notify customers about important changes such as delays, failed delivery attempts, or changes in the expected delivery time. Complex issues should be escalated to customer-support teams.

KEY DELIVERABLES

- ✓ Customer registration and authentication
- ✓ Order history and order lookup
- ✓ Natural-language order queries
- ✓ AI-based order identification
- ✓ Order status tracking

Overview

My Team

- ✓ Status explanations in simple language
- ✓ Order confirmation tracking
- ✓ Processing/preparation status
- ✓ Dispatch and pickup status
- ✓ Delivery-partner status
- ✓ Estimated delivery time
- ✓ Delivery-location information
- ✓ Live or simulated order location tracking
- ✓ Map-based order visualization
- ✓ Delivery route information
- ✓ Delay detection and notifications
- ✓ Updated ETA calculation
- ✓ Failed-delivery handling
- ✓ Delivery rescheduling support
- ✓ Customer cancellation/request workflow where applicable
- ✓ Automated customer notifications
- ✓ Proactive delivery updates
- ✓ Conversational AI assistant
- ✓ Context-aware order Q&A
- ✓ Multiple-order handling
- ✓ Order timeline
- ✓ Customer support escalation
- ✓ AI-generated order summaries
- ✓ Delivery issue classification
- ✓ Support-ticket creation
- ✓ Customer communication history
- ✓ Order tracking dashboard
- ✓ Delivery analytics
- ✓ Average delivery-time monitoring
- ✓ Delay and exception analytics
- ✓ Admin/order-operations dashboard
