SCOPE

Research Literature Discovery / Academic Search / Literature Review / Research Intelligence

DESCRIPTION

Develop an AI-powered research literature discovery agent that helps researchers efficiently discover, understand, and organize relevant academic papers and research literature. The system should understand a researcher's topic, keywords, research questions, or uploaded papers and identify relevant literature based on semantic similarity and research context.

The agent should summarize papers, identify key findings, methods, datasets, and limitations, and help researchers discover related or influential work. It should organize discovered literature and support comparison of papers, citation/context analysis, and identification of research gaps or emerging topics.

KEY DELIVERABLES

- ✓ Researcher profile and research-interest management
- ✓ Research topic/question input
- ✓ Keyword and query management
- ✓ Academic paper search and discovery
- ✓ Semantic similarity-based paper recommendations
- ✓ Relevant-paper ranking

Overview

My Team

- ✓ Abstract and full-text document processing
- ✓ AI-generated paper summaries
- ✓ Key findings and contribution extraction
- ✓ Research methodology extraction
- ✓ Dataset and experiment identification
- ✓ Limitations and future-work extraction
- ✓ Citation and reference analysis
- ✓ Related-paper discovery
- ✓ Similar and influential paper identification
- ✓ Paper comparison
- ✓ Research topic clustering
- ✓ Research trend identification
- ✓ Emerging-topic detection
- ✓ Research-gap identification assistance
- ✓ Natural-language conversational research assistant
- ✓ Follow-up literature search
- ✓ Saved papers and reading lists
- ✓ Research workspace/library
- ✓ Notes and annotations
- ✓ Search history
- ✓ Citation/reference organization
- ✓ Source-grounded responses with paper references
- ✓ Content provenance and source links
- ✓ Personalized literature recommendations
- ✓ Dashboard and research analytics
- ✓ Exportable literature summaries/reports
- ✓ Human review and verification of AI-generated research insights
