Application, Workflow Automation, Task
Management, Notifications, Data Analytics

SCOPE

Employee Productivity / Role-Based Task Management / Daily Work Assistance / Workflow
Automation

DESCRIPTION

Develop an AI-powered daily assistant that adapts to an employee's job role, responsibilities, priorities, and ongoing work. The assistant should help employees plan their daily activities, understand pending tasks, prioritize work, track progress, and receive relevant reminders. It should use available work context to provide role-specific suggestions and assist with routine tasks while keeping the employee in control of important decisions and actions.

KEY DELIVERABLES

- ✓ Employee profile and role configuration
- ✓ Role-specific responsibility management
- ✓ Daily task and activity management
- ✓ Task creation and assignment
- ✓ Priority and urgency classification
- ✓ Daily work-plan generation
- ✓ AI-powered task prioritization
- ✓ Pending-task identification

Overview

My Team

- ✓ Personalized daily recommendations
- ✓ Context-aware work suggestions
- ✓ Meeting and schedule awareness
- ✓ Task reminders and notifications
- ✓ Progress tracking
- ✓ Completed/pending task views
- ✓ Natural-language interaction with the assistant
- ✓ AI-generated task summaries
- ✓ Follow-up and action-item tracking
- ✓ Recurring task management
- ✓ Role-specific workflows
- ✓ Team and manager task visibility where permitted
- ✓ Daily/weekly productivity summaries
- ✓ Work-history and activity tracking
- ✓ Dashboard and analytics
- ✓ User-configurable automation and notification preferences
- ✓ Secure role-based access control
- ✓ Audit/history of AI-assisted actions
