INDUSTRY

Retail / E-Commerce / Local Commerce /
Quick Commerce

PLATFORM / TECH

Agentic AI, Generative AI, LLMs, NLP,
WhatsApp Business API, Web Application,
Product Catalogue, Order Management,
Payment Integration, Notifications

SCOPE

WhatsApp Commerce / Order Management / Conversational Shopping / Local Store Automation

DESCRIPTION

Develop an AI-powered WhatsApp ordering agent that enables customers to discover products, check availability, place orders, and receive order updates through a conversational interface. The agent should understand natural-language requests, identify products from the store catalogue, handle quantities and order details, clarify missing information, and create orders for the local store. It should also support store-side order management and provide customers with relevant order status updates.

KEY DELIVERABLES

- ✓ WhatsApp-based conversational ordering
- ✓ Customer registration and identification
- ✓ Product catalogue integration
- ✓ Product search and discovery
- ✓ Natural-language product queries
- ✓ Product availability checking
- ✓ Quantity and variant handling

Overview

My Team

- ✓ Address and delivery-detail collection
- ✓ AI-based intent and product understanding
- ✓ Clarification of incomplete orders
- ✓ Price and order-total calculation
- ✓ Order confirmation
- ✓ Order status tracking
- ✓ Customer order-history access
- ✓ Order notifications and updates
- ✓ Store-side order dashboard
- ✓ Accept/reject order management
- ✓ Inventory/stock availability integration
- ✓ Customer and store communication
- ✓ Payment integration or payment-status handling
- ✓ Multilingual conversational support
- ✓ Admin controls and configuration
- ✓ Order history and analytics
- ✓ Secure handling of customer and order information
